

Date 06.15.17

Dear Change Healthcare Customer:

Beginning September 1, 2016, X12N – the Insurance Subcommittee of the Standards Development Organization X12 – began releasing version 7030™ of their Technical Reports Type 3, or TR3s (aka transaction implementation guides) for public review and comment. The TR3s offered for public review and comment include the electronic health care administrative transactions currently adopted under HIPAA, as version 5010, as well as other electronic health care administrative transactions which have not been mandated but are used by the health care insurance industry today. While legislative adoption of version 7030™ cannot be guaranteed, the updated TR3s represent the first major release of the X12 transaction standards since version 5010. As such, industry review and feedback on these new standards is critical.

Cycles 1 through 4 have proceeded according to the schedule published at <http://www.x12.org/announcements/x12-announcement-2017-tr3-public-review-timeline-revision-6.cfm>. These TR3s are available online at forums.X12.org, with pdfs available during the review cycle. Cycles 5 and 6 will begin September 1, 2017. Downloadable change logs are available through the X12 Forum. X12N is currently reviewing the published schedule for Cycle 7.

Change Healthcare supports the standards development process and is actively participating in this important review and comment process. We have assembled enterprise-wide cross-functional teams of subject matter experts from our IT, Operations, and Solutions teams who will be reviewing the new transaction standards. We highly encourage you, as key industry stakeholders and our valued customer, to engage your own teams in the public review and comment of the version 7030™ TR3s.

Please reach out www.x12.org or contact Change Healthcare for assistance or questions on the process. Change Healthcare is privileged to partner with our customers and we remain committed to your success.
