

Realize the full potential of your diagnostic imaging environment with an Imaging Assessment

Value-based healthcare has affected provider reimbursement, pressuring you to control costs and boost efficiency.

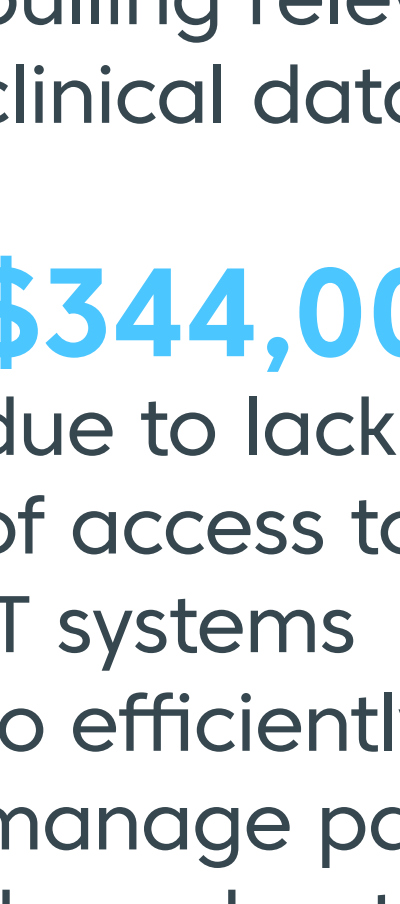

Inefficiency is no longer an option. A broken workflow not only impacts your diagnostic imaging operations but your entire healthcare enterprise.

How can you find improvement opportunities?

An **Imaging Assessment** can help identify outliers and bottlenecks throughout the exam lifecycle that cause a loss of real value. The outcome enables the imaging service line within your organization to work smarter, not harder, by improving productivity and efficiency.

Lack of best practices create financial risk

Annual Financial Impact of Risk Areas:

- \$1.2 million** due to time spent by radiologist pulling relevant clinical data
- \$1.1 million** due to 15% to 30% of patients not properly prepped
- \$344,000** due to lack of access to IT systems to efficiently manage patient throughput
- \$154,000** due to time required to track down referring physicians' orders
- \$144,000** due to patients not being pre-registered
- \$40,000** per physician due to lack of processes for reporting MIPS quality measures

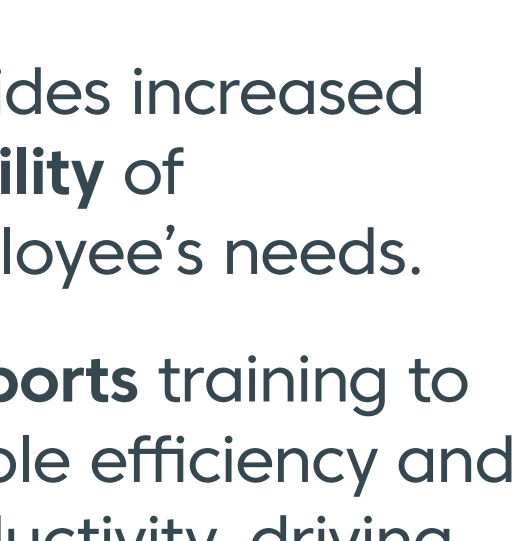

Delivering exceptional value to our clients

The **Medical Imaging Consulting** team of Change Healthcare offers a **no-cost** imaging workflow assessment that highlights the most productive opportunities for improved value within the imaging enterprise. Our deliverables include a report for use in future governance meetings to guide discussions and prioritize spending.

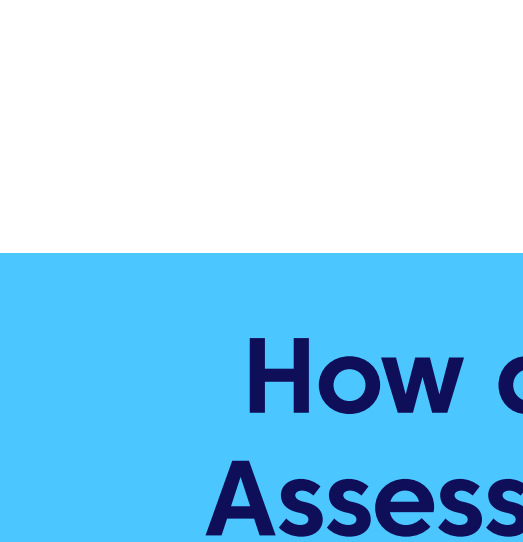

- An executive summary
- Detailed overview of key findings
- Financial impact summary of key findings

- Identifies opportunities to **Improve system utilization**
- Reduce costs and mitigate risks**
- Enhance business and technical performance**

Improved Performance

Enhanced Efficiency

Provides increased **visibility** of employee's needs.

Supports training to enable efficiency and productivity, driving improved patient care and satisfaction

- Benchmarks** imaging enterprise with industry best practices.

Actionable Reporting

How an Imaging Assessment works

Step 1 Pre-Assessment

2-3 weeks

- Understand key concerns and issues
- Identify goals & objectives
- Determine key stakeholders

Step 2 On-Site Assessment

1 Day

- 1-day workshop assessing operational, clinical, and technical environment
- Review imaging practices for quality objectives
- Understand KPI's

Step 3 Post-Assessment

3-4 Weeks

- Evaluate people, processes, and technology
- Benchmark imaging enterprise with industry best practices
- Present findings and identify areas for improvement that generate impact

Position your organization for the future

An **Imaging Assessment** lays the foundation for the right path forward. Talk to our **Medical Imaging Consulting** team to take the first step toward enhanced patient care delivery, and ultimately, a better return on your investment.
