

Data processing and management

Gather, analyze and validate data accurately and efficiently

Optum has more than 25 years of experience processing health care data to create and deliver important communications. We can manage your data input needs efficiently to ensure that your communications are delivered on time and to the right people.

Flexible data intake options

Since data files come in many shapes and sizes, Optum can handle multiple file formats to intake data, including CSV, XML and DBF. This gives you flexibility to submit data conveniently, in the format your systems output data. If your communications are precomposed, we can intake and process with metadata as needed.

Standardize your submission process

Data comes from many different systems and outputs. Many organizations also have multiple lines of business or health plans, each with different data outputs and configurations. We can help you standardize your submission process across these sources, to simplify the workflows and reduce administrative burden.

A single file, multiple outputs

Optum can process data for many different communications and document types. Optum can also create multiple communication outputs from a single data file, accelerating your ability to create and send multiple communications at once.

Helping you streamline your communications workflow with:

- Flexible data input options, including CSV, XML and DBF
- A standardized submission process
- Reduced administrative overhead and time
- Efficient and automatic processing capabilities
- A shortened timeline from start to finish
